

# Rosslyn ETL

All your spend data, in one place. Automatically.

## OVERVIEW

### What is it?

Automated data extraction is essential to achieving real-time procurement intelligence. Rosslyn has decades of experience extracting data from the world's biggest, and some of the world's strangest, ERP and procurement systems. Rosslyn's ETL processes save months of time compared to manual extraction, mapping and consolidation. Leveraging Rosslyn's toolset and expertise, procurement teams can focus on what matters: insight and savings.

## FUNCTIONALITY

### How it Works.

Rosslyn has several tools available to automate extraction from source systems, with varying degrees of automated data transfer to satisfy IT security requirements. Once transferred to Rosslyn's servers, the automated mapping, transformation, consolidation and loading into the Rosslyn Data Lake take place.

## APPLICATIONS

### Use Cases

Harmonizing spend across disparate ERP systems

Eliminating onerous manual reporting processes

Automatically combine PO data and invoice data from different systems

Achieve real-time visibility of spend across a global suite of procurement systems

## VALUE

### Key Benefits

# 01

Hands-off data extraction, transformation and loading into the Rosslyn Platform

# 02

Automated extraction set on a frequency that works for you

# 03

No need for your teams to spend time mapping data, Rosslyn does it for you

## IMPACT

### Why it Matters.

Procurement teams are often spending too much time wrangling data, manipulating it into reports and maintaining those reports just to get basic visibility into their spend. That's time they could be spending negotiating with suppliers, eliminating maverick spend or identifying supply chain risks. Rosslyn fully automates this process, bringing all spend data from all procurement systems into one place, unifying records where applicable, mapping different dimensions together and preparing the data for analysis. All without using any manual effort. This frees up the procurement resources to focus on utilizing the insights generated from analysis to reduce risk, improve compliance and ultimately save money.
